

# Configuration options

Here you can manage server configuration parameters that are identical to some parameters in the [configuration file](#) `/etc/saymon/saymon-server.conf`.

The changed parameters in the Web UI are more priority than the settings in the configuration file. The settings are automatically saved to MongoDB, the file `/etc/saymon/saymon-server.conf` is not overwritten.

- [Common settings](#)
- [E-mail settings](#)

## Common settings

These settings correspond to the parameters of the `server` section of the file `/etc/saymon/saymon-server.conf`

### Common settings

---
