

# Standard View

This view provides the most complete information about hierarchy of objects and links.

Each block can represent virtual or physical server, custom or business-metric as a single object or a group of objects, that can be moved, joined or resized.

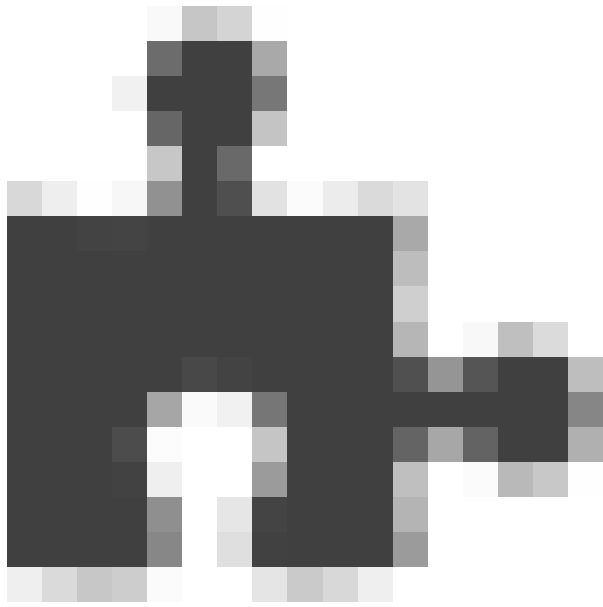

In case a block is too small to show full names of children objects there are badges with total number of sub-objects appear.

Dependent objects can be connected by link-objects or just "links".

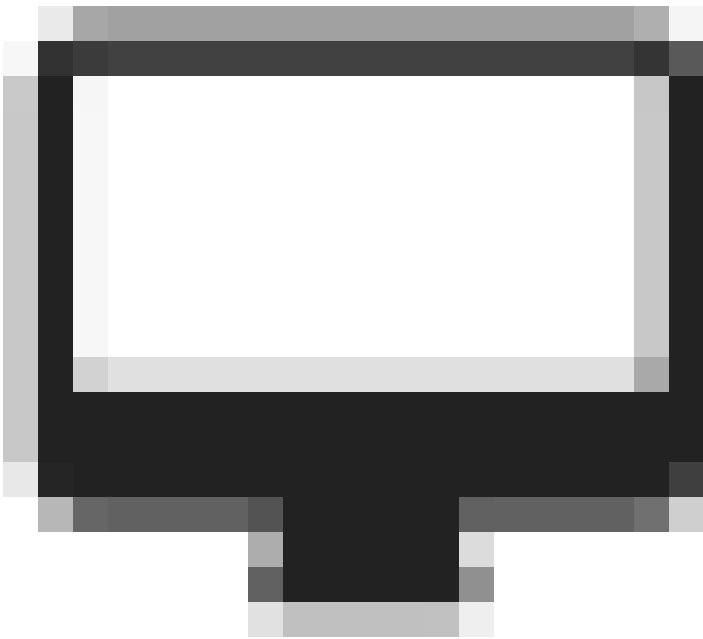

| Wide schema can be not only scrolled, but also dragged by its background.

In this view you can place cursor over the object and view icons for additional actions:

Icon	Action
------	--------

Add widget

Switch to [Standard View](#) of the object

Open [Info Modal](#) of the object

Move the object
