

Alarm history

Incidents are divided to **Active alarms** and **Alarm history** lists.

When the incident is closed or resolved, it is transferred to **Alarm history** list after the timeout, defined in the **server** section of the **/etc/saymon/saymon-server.conf** file like this:

```
...  
"server" : {  
  ...  
  "incident_timeout": 3600000,  
  ...  
},  
...
```
