Search and bulk operations

This window allows to search objects by different criteria and change their settings of:

- monitoring;
- parameters;
- state change conditions;
- alarm generation conditions;
- actions on state changes;
- properties.

state - select in the drop-down menu;

Pressing the "Search and bulk operations" button in the display modes panel will open the search window, where you will be prompted to enter:

- object name*;
- object class - select in the drop-down list;
- parent - select in the drop-down list;
- state - select in the drop-down list;
- the date of object creation - possible to specify both the specific date and the time interval;
- property* - enter the name and its corresponding value, in the absence of this, move the slider to the "Not available" (NA) position;
- tags;
- owner - enter a name or select a user in the drop-down list.

* "Object name" and "Property" fields are case-insensitive and support * sign to use search masks.

To activate the search, click the **Q Search** button. After that, a selection of objects matching the search criteria will appear.

To research or cancel it, click the **Clear** button.

The button **Report ▲** in the lower right corner of the window allows to export the properties of the objects selected from the list into an Excel file that contains:

- object name;
- date of object creation;
- property name;
- property value.

To exit the search mode and group operations, click the "Standard view" button in the display modes panel.
